Gloves

Scissors

Trowel

In less than 30 minutes you can create a no-guess, low mess container of fabulous plants. This easy-care combination was selected by a team of experts specifically for its beauty, plant compatibility, and outstanding performance all season long.

tip idea

Make clean-up a breeze! Lay a tarp under your work area to catch any stray soil. When finished, gather up the sheet and dispose or shake out the mess elsewhere.

Wish your container was mobile? Place your decorative pot on a plant caddy with casters so you can easily roll it from one location to another.

leftovers?

In case you have plants and potting soil left over, you could use them to:

- create another container
- share with a friend
- plant them in the ground
- give as a gift
- donate the plant

PREPARE

1

Water the plants for easier handling in the next steps. Gather your ingredients and tools. Work near the pot's final display location, so you won't have to move it far. Cut open the soil bag and fill your decorative pot 1/3 with the soil.

ARRANGE

2

Remove plants from their pots by gently squeezing the pot sides while grasping the plant near the stem's base. Arrange them in the 16-inch pot according to the diagram. The top of the root balls should be 1 inch below the top of the pot.

White Verbena

PLANT

3

Use an empty pot or trowel to scoop potting soil into the space around the arranged plants. Fill until the soil is level and 1 inch below the top of the decorative pot. This allows space for watering. Gently press the soil to ensure the plant roots have good contact with the soil.

WATER

4

Gently water your new plants. Add water until it starts to trickle out of the drainage hole. This will settle the soil and refresh plants after transplanting.

CARE

5

Water your container whenever the top inch of soil is dry to the touch; daily when the weather is hot and dry.

6

Feed weekly with water-soluble fertilizer (mixed according to the package's instructions).

7

Trim your plants every 1-2 months to remove dead leaves, stems, flowers, and to keep the plants from outgrowing the container.
